## For Your Information

## HOW TO ORDER

Just make a list of what you want, giving number, name, size and price. Tell us whether: to ship by freight or express. If you do not we will ship as we think best. If you wish shipment at some special date tell us, otherwise we will ship according to locality and season. Our terms are cash but we will ship C. O. D. if half is sent with order. Orders for future shipment should be accompanied by one-third the amount, balance at shipping time.

Certificate of inspection with each shipment.

## PLEASE TELL US

Tress are scarce this season, more so than for vears. Before spring is over many sizes and varieties will be sold out. Order early and have them reserved if you want later shipment.

Please tell us whether you would rather have a larger size at the larger price or a smaller size at the smaller price, if we should be out of the size you order. Also tell us whether you want us to send a similar variety if we are out of any variety ordered. If you do not want us to do so, mark "No Substitutions" on your order. If we substitute, the tree will be labeled with the correct name of the variety sent. For example, if we sent Stayman Winesap in place of Winesap it would be labeled Stayman Winesap.

If you do not tell us what to do we are obliged to use our judgment. We prefer to have your instructions.

Don't forget to tell us if your freight or express office is different from your postoffice.

## WHY WE DON'T PREPAY

We ship express or freight collect because our customers are so widely scattered that an average rate to all would be unfair to many in nearby states. If we prepaid we would have to do like anyone else who prepays-add it to the price we wanted to get and be sure to estimate it high enough so we wouldn't lose money on it.

If wanted by parcel post, allow extra for postage, unless you wish us to ship collect, which costs 13 c more. Trees larger than 3 to 4 ft . cannot be sent by parcel post. In a few cases, strawberries for example, we name an amount to be sent if wanted postpaid, because on a right light package we can't miss it but a few cents anyway.

## OUR GUARANTEE

We exercise care and diligence to have our varieties true to label and sell all our stock with the express guarantee that we will. on proper proof. replace any that may prove otherwise, or refund the amount paid for same, which shall constitute the extent of our liability.

We undertake to send out stock in first class condition. Success or failure then depends largely on planting, after care, climatic conditions, ctc., which we cannot control, some of which no one can control, so we cannot at these prices guarantee stock to live. Those nurseries who do guarantee stock to grow necessarily charge a higher price and the careful planter helps pay the loss of the careless.

## HOW NURSERYMEN BUY TREES AND WHAT THEY EXPECT

When a nurseryman buys fruit trees, unless they are small he buys by caliper or diameter because he considers that the best measure of value. For example, the three larger grades of 2 -year apple are $1 / 2$ to $5 / 8,5 / 5$ to $11-16$, and $11-16$ in caliper up. When the height is stated it is understood as the approximate average. The $1 / 2$ to $5 / 5$ in. grade is usually described as $31 / 2$ to 5 ft ., the $5 / /$ to $11-16$ as 4 to 5 ft . and the $11-16 \mathrm{in}$. up as $4 \frac{1}{2}$ to 6 ft . or 412 ft . up. Occasionally the $11-16 \mathrm{in}$. up is listed as $41 / 2$ to 7 or 5 to 7 ft ., though usually some trecs would be a little under 5 ft . and few 7 ft . If, for example, a list offered 4 to 6 or 4 to 7 ft . 2-year apple, by height only, a nurseryman would wonder whether he would get $5 / 8$ to $11-16 \mathrm{in}$. or 11-16 in. up or both mixed. Small apple are sometimes offercd by caliper, sometimes by height. One year apple are usually offered by height only.

The caliper grading of fruit trees varies a little with the class of trees. The grading specifications in this list are those used by nurserymen generally. When words or letters are used to designate grades, for example $X X$ and $X X X$, they are for the convenience of the nurseryman and his customers in ordering and are not uniform with all nurseries. One man's $X X$ may be the same as another's NXX.

Shade trces are usually graded by height up to 6 to 8 or 8 to 10 ft , larger sizes by caliper. Evergreens and shrubs can be graded by height only. Age only may be given, or it may be impossible to specify a grade, as in the case of strawberrics and many flowers.

In grading, the lower number is included, the higher excluded. Four to 5 ft . includes all from full 4 ft . up to 5 ft ., but full 5 ft . trees go in the 5 to 6 ft . grade. If you want nothing less than 5 ft . ordcr the 5 to 6 ft . grade.

Nurserymen would like for all varieties to be of equal size and appearance, but they do not expect it because different kinds have different habits of growth. For example Wealthy apple is short and stocky, Jonathan taller and more slender, so $5 / 8$ Jonathan would be taller than $5 / 8$ Wealthy. Neither are all classes equally well rooted or equally symmetrical. Apple are usually better rootcd than cherry. Damson plums are not as symmetrical as the Japanese, yet they are valuable trees and cannot be done without just because they are not as pretty. A violet will be a snialler plant than a hollyhock, bccause they grow that way.

After all you have to depend on the nurseryman giving you value, as one man's 3 to 4 ft . grade, for example, may not be the same as another's. We want to and try to give you your money's worth, whatevir the class of stock.

Combe Printing Co., Horticultural Printers, St. Jcseph, Mo.

## Peaches Bear the Third Year

PEACHES often come into bearing the thirl year and offer opportunities for quick returns and good profits to the man who will take care of his trees. A Southern Missouri orchard 3 and 4 years old produced 65 cars on 110 acres. A Northern Arkansas orchard cleared $\$ 100$ an acre on 4 -year Elbertas. And these were first crops and before-the-war prices. You no doubt have read of $\$ 500$ and $\$ 600$ an acre, maybe more. Sounds large? Yet $\$ 600$ an acre is only $\$ 4.50$ per tree if planted $18 \times 18$ feet. That doesn't sound large. But cut it in two if you like, and if you get one crop in three it averages $\$ 100$ an acre. Have you a farm crop that averages that at before-the-war prices?

The 1920 census showed that there were $30 \%$ less bearing peach trees in the L'nited States than in 1920. The demand is increasing. The supply has decreased. The natural tendency is toward higher prices.

A sandy loam or gravelly soil is best but the peach adapts itself to almost any well drained soil. Planted $16 \times 16$ feet requires 170 trees per acre; $18 \times 18$ feet, 134 trees per acre.

| Each | Per 10 | Per 100 |
| ---: | ---: | ---: |
| $\$ 0.55$ | $\$ 5.00$ | $\$ 45.00$ |
| .50 | 4.50 | 40.00 |
| .45 | 4.00 | 5.00 |
| .40 | 5.50 | 50.00 |

45
+0
\$5. 00
84.00

The following list is arranged approximately in order of ripening. The dates named are approx-

Victor-Creamy white with a red blush; juicy, sub-acid, good; medium size; semi-cling.

Arp Beauty-The earliest good yellow-fleshed peach; vigorous, productive, and hardier in bud than the average; yellow, heavily blushed; sweet.
Greensboro-Large, creamy white, with a yellowish cast, beautifully colored crimson; flesh white, very juicy; an excellent early peach; mid June; hardy and a profuse bearer.

Carman-Large; creamy splashed red; juicy, rich, sweet, good; nearly free; hardy; productive.

Champion-Large; white, beautiful red cheek; flesh white, sweet, juicy, rich, dellcious; free stone; early Aug.; quite hardy; bears young; pro ductive.

Belle of Georgia-Very large; white, red cheek firm, juicy, high quality; freestone; early Aug.; hardy; very productive; excellent shipper.

Crawford Early-Large; yellow, deep red cheek; rich, slightly sub-acid; freestone; early August.
J. H. Hale-A little larger and firmer and trees and buds seem hardier than Elberta; whether it
is adapted to as many kinds of soils is not yet determined. We do not expect it to drive Elberta from the marliet but to share it, as J. H. Hale is a few days the earlitr.

Elberta-Very large; golden yellow, crimson cheek; firm, juicy, good; freestone; mid Aug.; excellent shipper; vigorous, productive, profitable.

Crosby-Orange yellow, splashed red; sweet, juicy, rich; freestone; latter Aug.; medium size; hardy.
Iarge Indian Cling-A red-fleshed clingstone, esteemed for preserving and pirkling.

Old Mixon Cling-Large; creamy white, red cheek; flesh white, juicy, rich, fine; latter Aug.

Crawford Late-Large; yellow, deep red cheek; juicy, rich; freestone; latter Aug.-Sept.

[^0]
## Apple Opportunities

THERE are thousands of acres where apples can be grown as good and cheaper than in the famous apple centers. Advertising has lead many people to think that apples can only be profitably grown in some of the Western and Northwestern states. We do not want to reflect in any way on those states. But we want to remind you that looking far away has blinded us to the opportunities in Missouri, Arkansas and adjoining states, than which there is no better fruit belt in the world. We have read of results, and because little is said of the care given, it is of ten assumed that distant states can raise fruit easier. Mr. G. C. Richardson, a leading Kansas orchardist, has said: " It is my observation that in Washington, Oregon and Idaho, where they do not take care of their orchards, they do not raise any more fruit than we do. * ** I believe that injurious insects are worse in that country than they are here. Their trees require more care and attention than ours do." They give it. That is the secret of their success. Take care of your trees as well as you do your farm crops, prune, fertilize and spray, and they should pay and pay well. Even for the home orchard spraying pays. A small outfit costs little and you can secure the materials ready prepared-just "add water and serve." The home orchard can yield an abundance of fruit for home use and a surplus for sale.

The ripening dates are approximate average here; allow about five to seven days for each 100 miles north or south. The altitude will also affect the date of ripening.

Standard size, about $31 / 2$ to $41 / 2 \mathrm{ft}$., $1 / 2$ to $5 / 8 \mathrm{in}$. caliper, branched ........ . 45 4.00 35.00
Special: Any fire at the 10 rate, less at each rate; 50 at the 100 rate.

## Summer Apples

Benoni-Deep red stripes on rich yellow; juicy; mild subacid; fine dessert quality; early to mid July; bears freely and rather young.

Early Marvest-Bright straw; juicy, rich subacid; good; very early; bears ratlie: young; productive.

Red June-Very red; juicy, brisk subacid, good; medium size; June-July; a young bearer.

Yellow Transparent-Good size; yellowish-white; fine grained, crisp, juicy, sprightly sub-acid; good for eating and cooking; mid June; hardy; a very young, regular and abundant bearer.

## Autumn Apples

Connor's Sweet-Large; mottled red and yellow; crisp, juicy; good; Aug.; a good grower.

Muiden Blush-Large; clear yellow, crimson cheek; very juicy, sub-acid; mid autumn; good ror cooking and drying; hardy; bears rather young.

## Winter Apples

Arkansas Black-Medium large; almost black; flesh yellow, firm, crisp, sub-acid; Dec.-March;
unproductive on some soils; commands a good price where it call be grown.

Ben Davis-Mottled and striped red on yellow. mild sulacid; bears young and freely.

Delicious-Roundish conic, medium to large, pale yellow, mostly covered with red, striped dark carmine; juicy; mild sub-acid; good. If ordered without other apples 2c each extra.

Grimes' Golden-Of best quality; beautiful golden yellow: medium to large; crisp, juicy, rich sub-acid, aromatic; fine dessert apple, good for cooking, especially fine canned; Oct.-Dec.; blooms late: hardy; bears young.

Ingram-A very late keeper; yellow, almost covered with bright red stripes; juicy, very mild sub-acid, good; blooms late; bears young and heavily.

Jonathan-Very attractive, lively deep red; high flavor; excellent for dessert, cooking and market. firm, crisp, juicy, very aromatic, mild sub-acid: Oct. and later; bears rather young.

Mammoth Black Twig-Greenish, largely overspread, dull, deep red, sometimes almost black; very firm, moderately juicy, sub-acid, good: keeps late.

Reagan; Black Ben Davis-Large; attractive rich red to maroon, rarely striped; firm, juicy, mild sub-acid; ships well, keeps well, bears young, regularly and abundantly; profitable.

Stayman Winesap-Large; attractive shape, greenish-yellow striped and often nearly covered with dark red; firm, crisp, very juicy, aromatic. sprightly pleasant sub-acid; very good; keeps late; bears young and regularly; less brilliant than the old winesap, but adapted to more solls and climates.

Winesap-Bright deep red, flesh yellow, very rlch, crisp, very juicy, sprightly sub-acid, very good; Dec.-March; bears young.

York Imperial-Large; attractive greenish-yellow shaded crimson; crisp, juicy, sub-acid, becoming mild; Dec.; bears heavily and rather young.

## Crab Apples

Transcendent-A large crab; golden yellow, crimson cheek; crisp, juicy, subacid; Aug.-Sept.

## Made Good with Cherries

SCHUYLER STEVENS of Smith Center has demonstrated beyond question the value of cherries in Western Kansas. In 1915 he planted 500 trees. Now if you will recall the summers since 1915, every one excepting 1915 must be classed as drouthy seasons. In spite of adverse conditions, here is what Mr. Stevens says in a letter dated June 28, 1919: "The Dyehouse were the first to ripen, then the Early Richmond and now the Montmorencies are on hand. The Wragg will follow in July. I will have about 300 crates and they bring me $\$ 3.00$ net as I require the crate returned. This will bring me $\$ 900$ for the cherries on four acres the fourth season." *** I know Mr. Stevens personally and I am familiar with his method of orcharding. * * * The secret of his success has been cultivation. He has never allowed a weed to grow in his orchard.-Chas A. Scott, in Kansas Farmer, March 6, 1920. You will notice the price Mr. Stevens received was below the market in many places, yet he made a good thing the first crop. Wragg and English Morello are very similar if not identical.

Plant 18 to 20 feet apart on well-drained ground. The list is arranged in the order of ripening.

Special: Any five at the 10 rate, less at each rate; 50 or more at the 100 rate.

Dyehouse-A few days before Early Richmond; light red; productive.

Early Richmond (May Cherry)-Medium size, round, bright red, darker when fully ripe; very juicy, sprightly acid; latter May-June; hardy, very productive; profitable; succeeds everywhere.

[^1]English Morello-Large, dark red, nearly black; flesh dark purplish crimson; juicy; rich acid; prolific; latter June-July dwarfish.

## Currants

Red and white, strong 1-year, 20c each,
s1.7s per 10 .

# Plum Trees 

Standard size, ${ }^{-16}$ to $9-16$ in. caliper, about 3 to 4 ft., branched ................ . . . 55
Special: Any five at the 10 rate, less at each rate; 50 or more at the 100 rate.

Abundance-Japan. Large, bright red over yellow; juicy, sweet, rich, very good; cling; mid-July; hardy, very productive; bears young.

America-Medium to large; golden yellow with distinct red cheek; juicy; cling; July: hardy, productive; bears very young. One of the most reliable.

Burbank-Japan. Very large, bright, dark red on yellow; flesh yellow, firm, juicy, rich, sugary; cling; latter July; bears profusely.
Deck Damson-An improved Blue Damson; a little larger; the most productive Damson here: parts from pit when fully ripe; Aug.-Sept. Exceptionally good for canning and preserving.

Endicott-Large; roundish; dark garnet-red; flesh yellow, sweet, juicy; midseason.

Red June-Japan; dark coppery red; flesh yellow, juicy, sweet; semi-cling; early; productive.

Wild Goose-Medium to large; bright red; sweet.
America, Endicott and Deck's Damson can be furnished in all sizes; other varieties extra and standard size only.

## Pear Trees

Garber-Large, waxy yellow, red cheek; early Sept.; good for canning and market and for pollenizing others; hardy; vigorous; very resistant to blight.

Kieiffer-Very large, rich, yellow tinted red; very juicy; develops good flavor if ripened slowly in a cool, dark room; very resistant to blight, hardy, very productive, ships well, profitable pear; Sept.Nov.; bears about the fifth year; plant Garber to pollenize it.

## DWARF PEARS

Dwarf Pear-Occupy little room, are valuable where space is limited and begin bearing younger, often the year after planting.

They may be planted 10 to 12 feet apart and kept headed back.

Duchess d'Angouleme-Very large, greenish yellow, dull red cheek; juicy, melting, slightly granular; Sept.-Oct.; productive, hardy, vigorous.
$\mathbf{X X}, 5 / 8$ in. caliper and up, $\$ 1.00$ each, $\$ 9.50$ per 10. $\$ 90.00$ per 100 .

## Gooseberries

THE demand for Gooseberries is always good. They are easily grown, readily respond to care, and are reliable annual bearers. Plant $3 \times 5 \mathrm{ft}$., 2,900 per acre; or $4 \times 5$ feet, 2,175 per acre. A northern slope is preferable, especially in the Central and Southern states.

Houghton-Of medium size, but a profuse bearer and a money maker. Very free from mildew, of easy cultivation; the best for most sections; glossy pale dull reddish brown when ripe, but usually picked green.

2 -yr., 25 c each, $\$ 2.00$ per $10, \$ 15.00$ per 100.
Downing-Medium to rather large, pale green, good; productive; nildseason.
$2-\mathrm{yr} ., 30 \mathrm{c}$ each, $\$ 2.50$ per $10, \$ 20.00$ per 100.
Because of shipping regulations Gooseberries, Currants and White Pine cannot be shipped into Nebraska, Kansas, Oklahoma, Texas and the Western States.

## Grapes Bear After Freezing

SINCE living in Kansas I have several times seen the new growth on our grape vines killed by frost; but found that where grapes had been kept well pruned and cultivated they possessed sufficient latent force, owing to their widespread root growth, to push out new shoots from otherwise dormant buds $* * *$ You will find when your grapevines are frozen, even as late as the first of May, that if all green matter is frozen dead, then otherwise dormant buds will break and the new growth from them will come right on and produce new shoots, from which a fair crop of grapes will grow; but if a single joint of the first crop of shoots is left the new growth will start from the green bud on such shoots, and the resultant growth will not produce any grapes, but will produce a shoot with leaves only. So if the new growth is not frozen back to the previous year's wood it should at once be pulled off, thus forcing the latent buds to start.-Wm. H. Barnes, before the Kansas State Horticultural Society.

Prices are for 1 -year No. 1 vines. Five of a kind at the 10 rate; 25 of a kind at 100 rate.

Agawam-One of the best red grapes; large; sweet, rich aromatic; ripens after Concord and may be kept late. 20 c each. 35 c per 2. 50 c per 3 . $\$ 1.60$ per 10 . $\$ 14.00$ per 100 .

Binner-Medium size: pink: sweet. 20c each, .55 c for 2. 50 c for $3, \$ 1.60$ per 10 , $\$ 14.00$ per 100 .

Campbell Early-Very early; very productive; large, black, sweet, high quality; adheres strongly to stem. keeps well and ships well. 23 c each, 45 c per 2. 65 c per $3 . \$ 2.00$ per $10, \$ 1 \$ .00$ per 100 .

Concord-The most popular; large, black, juicy, sweet: vigorous, very hardy, healthy, productive; mid to late August here. 15 c each, 2 (c" per 2, 40 C per 3. $\$ 1.00$ per $10, \$ 9.00$ per 100 .

Moore's Diamond-Large, yellowish-green, juicy, sood: ripens a little before Concord. 20 c each, 35 c per 2. 50 c per $3, \$ 1.60$ per 10 , $\$ 14.00$ per 100 .

Moore's Carly-Black; about two weeks before Concord; desirable for home and market for its size. season, hardiness and productireness. 23 c each. 45 c per $2,65 \mathrm{c}$ per $3, \$ 2.00$ per 10 . $\$ 18.00$ per 100.

Niagara-Large; pale yellowish-green; juicy, sweet; good for table or market; a white Concord; ripens with it or a little later. 20c each. 35 c per 2.50 c per $3 . \$ 1.60$ per 10 , $\$ 1.40$ per 100 .

Worden-Black; large; about 5 to 10 days earlier than Concord: berries larger, of better quality: vigorous, healthy. productive. 20c each. 35c per 2 50 c per 3 . $\$ 1.60$ per $10, \$ 14.00$ per 100 .

## Rhubarb or Pie Plant

Rhubarb or pie plant is easily grown, yields abundantly and is easily prepared for market. The market demand makes it one of the best commercial vegetables. Early, just before Asparagus: large, tender, delicately flavored stalks. Plant $21 / 2 \times 4$ leet, covering the crown 2 inches. The secret of success is well drained soil.

|  | Each | noz. | Per 25 | Per 100 |
| :---: | :---: | :---: | :---: | :---: |
| 2-year | \$0.10 | \$1.00 | \$2.00 | \$7. 50 |

## Horseradish

Productive: so easily grown it should find a place in every garden: a rich, moist soil is preferable. Sets 5c each, 25c doz., $\$ 1.50$ per 100 .

## Does Apple Growing Pay?

listen: One orchard near Troy that cost its owner not to exceed $\$ 1500$ in yearly expense, the fruit on the trecs was sold this year for $\$ 13,000$. Feport Kansas state Horticultural Society.

## PARCEL POST

If plants are wanted ly parcel post allow extra for postage, except where quoted postpaid. Trees larger than 3 to 4 ft . cannot be sent by parcel post. Why we don't prepay is explained on page 2 . <br> \title{
Blackberries Yield <br> \title{
Blackberries Yield $\$ 394$ Per Acre
} $\$ 394$ Per Acre
}

WILD BROS. NURSERYCOMPANY

Early Harvest Blackberry, in experiments by the Missouri Agricultural Experiment Station, yielded gross returns at the rate of $\$ 347.60$ per acre in 1919 and $\$ 394.20$ per acre in 1920 . Mr. R. B. Rushing says there will usually be from 150 to as high as 250 cases of 24 quarts per acre.

Blackberries begin bearing the second year and may be depended on for regular, profitable crops under suitable conditions. They are at their best in a strong, deep loam that will retain moisture, tending toward clay rather than sand. If properly tended they may be planted $2 \times 6$ feet, requiring 3600 per acre.

Early Harvest-The most profitable of all on account of its extreme earliness, hardiness and productiveness; glossy black, firm and ships well: growth strong. 35 c per $10,60 \mathrm{c}$ per $25, \$ 2.00$ per 100 , $\$ 17.50$ per 1,000 .

## Dewberries Earlier Than Blackberries

WHEREVER there is a market for blackberries, dewberries will be profitable. Ripening between strawberries and blackberries, they command a good price. Land can be used that is too wet or not fertile enough for blackberries, and they are less expensive to grow. Plant 2 feet apart in rows 4, or preferably 5 feet apart requires 5,450 or 4,350 plants per dcre, respectively.

$$
\begin{aligned}
& \text { Lucretia-Large, often } 11 / 2 \text { inches long; sweet the close of the strawberry season before Early } \\
& \text { and luscious throughout; for size and quality is Harvest; the variety most extensively grown for } \\
& \text { unexcelled by any of the blackberries; ripens at per } 1,000 \text {. }
\end{aligned}
$$

## Raspberries Bear the Second Year

THEY begin bearing the second year, ripen between strawberries and blackberries, sell well and are reliable croppers under suitable conditions. Deep soil that will retain moisture during a dry season is desirable. Planted $3 x 6$ feet requires 2,420 per acre. King may be planted $3 x 5$ feet. We recommend spring planting of black raspberries.

Black Pearl-A little earlier than Cumberland; excellent quality; jet black; firm; hardy, vigorous. 40 c per $10,70 \mathrm{c}$ per 25 , $\$ 2.50$ per 100 , $\$ 20.00$ per 1,000 .
$\checkmark$ Cumberland-Black; large; firm; excellent quality; midseason; very hardy; productive. 40c per $10,70 \mathrm{c}$ per $25, \$ 2.50$ per $100, \$ 20.00$ per 1000 .

Kansas-Black; large; firm; of good quality; early; productive. 30 c per $10,60 \mathrm{c}$ per $25, \$ 2.00$ per $100, \$ 16.00$ per 1,000 .

- King-Large; bright red; firm; good flavor; season early and long; hardy; productive. 40 c per $10,70 \mathrm{c}$ per $25, \$ 2.50$ per $100, \$ 22.00$ per 1,000 .

St. Regis; Ranere-Bright red; quality good; season very early and long. After the old canes have borne the young canes begin and in some sections bear freely till fall; in others, especially where the summers are dry, but little in the fall. If its success as an everbearer or fall bearer in your locality is unknown, try it in a limited way at first. 40 c per $10,70 \mathrm{c}$ per $25, \$ 2.50$ per 100 , $\$ 22.00$ per 1,000 .

## Asparagus

Conover's Colossal-The standard market variety; very large; growth rapid, productive; good

Columbian Mammoth White-A vigorous variety, producing white shoots of excellent quality. Grown from seed and sports some.
Palmetto-Large, early, productive, good; very resistant to rust; adapted to North and South.

## Prices of Above:

2 -year, 40 c per $25,51.25$ per $100, \$ 9.00$ per 1000 . 1 -year, 30 c per $25,1.00$ per $100,7.00$ per 1,000 .
Washington-A new variety developed by the U. S. Department of Agriculture; bred especiallv for vigor and resistance to rust. 1 -year, 25 c per $10,40 \mathrm{c}$ per $25, \$ 1.25$ per $100, \$ 9.00$ per 1000 . 2-yeaa, 35 c per $10,50 \mathrm{c}$ per $25, \$ 1.50$ per $100, \$ 11.00$ per 1000 .

## Strawberries

## Progressive Everbearing

Progressive gives a good crop the first year. We have picked berries throughout summer and until hard freezing weather. The flavor, color and shape remind one of Dunlap and Warfield; of good medium size, and perfect flowered. Especially valuable for the home garden, particularly if planted where they can be watered in case of dry weather.
The U. S. Department of Agriculture says: "The plants are the most vigorous of all the everbearers now in the trade, and are, so far as observed, the hardiest variety of strawberry now grown in this country, enduring the extreme climate of the upper Mississippi valley remarkably well. The follage is very resistent to leaf spot diseases. Both the plant and fruit closely resemble the Dunlap. * * It is adapted to sections where the Dunlap succeeds and should be planted on fertile soils."

60 c per $25, \$ 2.00$ per 100 , postpaid.
Other varieties will be quoted in the spring catalog or by letter on request. We recommend planting strawberries in the spring.

## Shade Trees

Because of the comparatively greater cost of packing large shade trees in small lots we are obliged to charge 2 comparatively higher each rate. However, you can order five or more of the $11 / 2$ to 2 inch caliper or larger, either one variety or assorted, at the 10 rate. Smaller sizes, 5 of a kind at the 10 rate.

Sugar Maple (Hard or Rock Maple)-Dense, symmetrical crown; the best of its class for lawn or street planting; leaves dark green, in autumn beautiful shades of yellow, orange and scarlet.
$14 / 6$ to $11 / 2$ in. caliper..... $\$ 1.50$ each, $\$ 12.50$ per 10 1 to $11 / 4$ in. caliper.... 1.25 each, 10.00 per 10 6 to 8 feet................ . 75 each, 6.00 per 10 5 to 6 feet................ . 50 each, 4.00 per 10

Norway Maple-Large, handsome; branchea spreading; round, compact, head; follage deep, green, pale yellow in autumn.

Each Per 10
3 in. caliper.......................... 84.00 \$32 50
2 in. caliper, 10 to 12 feet......... $2.00 \quad 17.50$
$11 / 2$ in. callper, 8 to 10 feet......... $1.50 \quad 14.00$
Norway Poplar-"The Sudden Saw Log;" resembles Carolina Poplar, but perhaps more rapid in growth.

6 to 8 inches, for lining out hedges. 12c each, 900 per 10 . $\$ \$ .00$ per 100.

## Hardy Flowering Shrubs and privet for hedging

THE early days of Spring are brightened and made more cheerful by the great masses of Golden Bell, often blooming here in March. By a selection of those blooming at different times, for example Bush Honeysuckle, Mock Orange, Spirea, Hyrangeas, etc., a succession may be had until September. Shrubs give the lawn an attractive, finished appearance, and make a beautiful display in a year or two. They appear to best advantage planted in groups along the boundaries or division line, at the edges or corners of lawns, at the foundations of buildings, and along walks and drives.

Althea; Rose of Sharon-Of upright habit, reachlng a height of $10-15$ feet; hollyhock flowers in late summer; easily grown; double blush, double red, single white.
Sto 4 feet.................... 45 c each, $\$ 4.00$ per 10

## Special Collection D

One dozen IIardy Flowers in four to six varieties. our selection, all food bloomers, s1.2.) or ${ }^{2}$ dozen S3.25.

Japanese Bell Flower (Platycodon)

## Peonies Are Easily Grown

HARDY as the oak, Peonies are so easily grown that little need be said. Often in neglected gardens one sees large clumps that have flourished and bloomed for years. Yet they amply repay all attention given them. The flowers are large and showy, without being coarse, and range in color from snowy white through all shades of pink and deep red, with even yellow. Many are delightfully fragrant. They give a grand display, blooming here in May.

Prices quoted are for good strong divisions from blooming plants. We are confident they will please you. We plant divisions and that is the rule among commercial growers. Six of a kind at dozen rates. Large lots will be quoted by letter.

We have endeavored to convey as accurate an impression of the colors as can be done by words. The guards are the wide outer petals; bomb, crown, rose, etc. refer to the type or form of flower classified as follows:

Crown-Wide crown petals are developed in the center with narrower, shorter petals forming a collar or ring around them, the guards and crowns often one shade and the collar another or a lightcr tint.

Bomb-The central petals are uniformly wide and approach the guards in form but distinctly differentiated from them and form a globe-shaped center without collar or crown and without anthers.

Semi-Rose-Flowers that would be classed as rose but for an occasional pollen-bearing stamen.

Rose-The process of doubling is completed. The stamens are all fully transformed into evenly arranged wide petaloids similar to the guards. They may not always be indistinguishable from the guards, but if quite distinct it would be called a bomb. The line dividing the rose and bomb is thus seen to be quite an arbitrary one.

Canari-Guards white, barely tinted flesh, center sulphur becoming pure white; bomb type; fragrant; large; long, strong stems; late midseason; blooms freely. 40 c each. $\$ 4.00$ per doz.

Candidissima-Guards pure white, center tinged sulphur becoming white; large; fragrant: early; rose type; a good grower. 40 c each, $\$ 4.00$ per doz.

Crown of Gold-Famous for its beauty; snowywhite reflecting the golden stamens, the center petals beautifully flecked and bordered carmine; very large; late; fine; immense; semi-rose type. 50 c each, $\$ 5.00$ per doz.

Dr. Bretonneau-A charming delicate silvery rose to silvery pink, center tipped cream; large; full; fragrant; bomb type; midseason; free bloomer. 50 c cach, $\$ 5.00$ per doz.

Duc de Cazes-Broad, lively carmine-red guards, center rose; fragrant, crown type; midseason; growth strong, blooms freely. 40 c each, $\$ 4.00$ per doz.

Duchesse de Nemours-One of the best regardless of price; superb ivory white hecoming pure

White; fragrant; early to midseason; crown type. 40 c each, $\$ 4.00$ per doz.

Duchesse d'Orleans-Large carmine pink guards, center soft pink interspersed with salmon; large: fragrant; bomb type; midseason. 35 c each, $\$ 3.50$ per doz.

Duke of Wellington-Broad white outer petals, center very full, sulphur-white becoming pure white; fragrant; bomb type; late; long, strong stems; blooms freely; very large flowers; fine. 50c each, $\$ 5.00$ per doz.

Edulis Superba-Beautiful deep rose pink; very fragrant; large, of good forin; one of the earliest and blooms over a long season; growth strong, vigorous and blooms profusely. 30 c each, $\$ 3.00$ per doz.

Felix Crousse-An extra brilliant, rich, even, dazzling ruby red; large, globular, bomb type; midseason; growth strong, vigorous; blooms freely; fine. 75 c each, $\$ 7.50$ per doz.

Festiva Maxima-Of enormous size and wondrous beauty; pure paper white, some central petals
flecked carmine; early; very fragrant; very long, heavy stems; fine. 50 c each, $\$ 5.00$ per doz.

Floral Treasure-Ibright delicate shell pink: large; fragrant; blooms freely; rose type: millseason. Much like lerlicatissima. 45 e each, $\$ 4.50$ per doz.
(irandiflora-After almost all other l'eonies are gone (irandiflora hears its profusion of immense. very fragrant flowers, bright sea-shell pink tinged lilate rose type; stems long. $\overline{50}$ each.

Lady Darmonth-lure white, center sometimes tipped carmine; rose type; early; fragrant; blooms freely. \$1.00 each.

Lady Derby-Fine waxy white, guard petals delicately tinted rose when first opening: very large; semi-rose type. $\$ 1.50$ each.

Mad. Calot-Opens very delicate pink becoming white; large; early; blooms freely; rose type. 50c. each, $\$ 5.00$ per doz.

Mad. de Verneville-An enormous producer of large, compact, extra fine flowers; very broad white guards, center slightly blush becoming pure white flecked carmine; early; fragrant; bomb type. :0c each, $\$ 5.00$ per doz.

Madame Ducel-A very large, very double, perfectly formed globular bloom, the center petals as heautifully incurved as in a chrysanthemum; bright silvery pink; fragrant: bomb type: midseason to late: blooms freely. 75 c each, $\$ .50$ per doz.
